ADVISORY ACTION

Response to Argument

Applicant, on page 3 of the remark, argues that Melaku does not teach or suggest a limitation where the controller is adapted to "present a matching icon, if any, on said display to indicate receipt of said received electronic message as well as the sender thereof". However, the Examiner respectfully disagrees.

In response to the Application's argument, Melaku disclose in Figure 1, paragraph 40 to 41 that [0040] that the handset 102B is in a sleep mode until notified that either a new SMS message or a new call. Upon notification of a new SMS (or EMS) message, a determination is made as to whether the message has a PCLI header. If the SMS message does not have a PCLI header then the process returns to the sleep mode. If the SMS message includes a PCLI header, then the PCLI picture (or other data) and caller ID data is retrieved 240 and stored in the picture cache 154. **Upon notification of receipt of a new call, the caller ID is retrieved for the call, and a determination is made as to whether the caller ID for the call matches the caller ID for a picture in the picture cache. If there is no match, then the PCLI application software returns to the sleep mode. If there is a match, then the picture is displayed on the handset.** As discussed above, in one embodiment, the picture is displayed after a first ring of the handset, however, in other embodiments, the picture may be displayed at some other point in the call connection process, or after the call has been fully connected.
